# Latin American Hub for Bioimaging through Open Hardware (LIBRE hub)

The screenshot shows the LIBRE hub website homepage. At the top, there is a navigation bar with links for HOME, ABOUT, PEOPLE, SEMINARS, WORKSHOPS, RESOURCES, and JOIN. The logo "LIBRE hub" is located at the top left, with the subtitle "Latin American Hub for Bioimaging Through Open Hardware". Below the navigation bar is a large photograph of seven people (six men and one woman) standing together in a group. Below the photo is a descriptive text block and a footer with social media links.

Through Open Hardware

HOME ABOUT PEOPLE SEMINARS WORKSHOPS RESOURCES JOIN

The Latin American Hub for Bioimaging Through Open Hardware (LIBRE Hub) is a training network for open source bioimaging hardware in Latin America with the goal to empower regional researchers through practical workshops, seminars, networking, and online resources adapted to local needs and re-published in local languages.

# Strobe-enhanced microscopy stage

by Pierre Padilla-Huamantinco, Matías Hurtado-Labarca, and Tobias Wenzel  
Latin American Hub for Bioimaging Through Open Hardware (LIBRE hub)

## Strobe-enhanced microscopy stage

### Build the 3-level microscopy stage

Print the plastic parts

Laser cut the acrylic parts

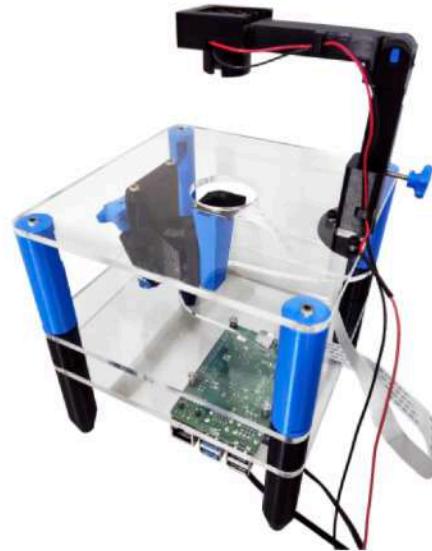

Assemble the focus mechanism

Assemble the basics optics module

Attach parts to the top plate

Attach parts to the middle plate

## 3-level microscopy stage

Before you start building the station, you will need to source all the components listed in our bill of materials ([HTML](#), [CSV](#)), which is given on the next page.

## Instructions

# Workshops for Latin America

**MRI: PROCESANDO TUS PROPIOS DATOS**  
Taller de 2 días de LIBRE hub

Taller teórico y práctico para conocer y utilizar software público para procesar la señal, y reconstruir imágenes, de resonancia magnética, basado en el lenguaje de programación Julia.

**¡Inscríbete!**

**ANFITRIÓN: PABLO IRARRAZAVAL**

20 y 21 de noviembre 2023  
Campus San José, Pontificia Universidad Católica de Chile

**INTRODUCTION TO NAPARI FOR BIOMIMAGE ANALYSIS**

Attendees will learn to leverage the features of napari, a powerful, open-source, Python-based platform for bioimage analysis at our three-day online workshop. With dedicated Spanish and Portuguese language support, participants across Latin America will learn the basics of how to navigate bioimaging datasets and enhance their research capabilities.

**Sign up here!**

**HOSTED BY:**  
Latin America Bioimaging | LIBRE hub

Date: August 7, 9 and 10, 2023

**LOW-COST LASER ILLUMINATION FOR MICROSCOPY**  
2-Day in-person LIBRE hub Workshop

Attendees will learn to build a basic laser module for microscopy using a blue (445nm) fiber-coupled laser diode, a current source, and speckle diffuser. Expandable for various colors and control options.

**Sign up here!**

**HOST: Vicente Parot Ph.D.**

December 11-12, 2023  
Campus San Joaquín, Pontificia Universidad Católica de Chile

**STROBE ILLUMINATION FOR BIOMAGING OF FAST PROCESSES**  
Hands-on Workshop by LIBRE hub

Attendees will learn how to build, use, and modify our low-cost microfluidic droplet generation workstation as part of their research.

**Sign up here!**

**HOST: Tobias Wenzel Ph.D.**

June 28-29, July 2023  
Campus San Joaquín, Pontificia Universidad Católica de Chile

# Open Source Hardware and the Wenzel Lab

Asst. Prof. Dr. Tobias Wenzel

# Open Source Hardware

Open source hardware is hardware whose design is made publicly available so that anyone can study, modify, distribute, make, and sell the design or hardware based on that design. (...) [OSHWA]

# Why Open Instrumentation?

- Accessing advanced biomedical methods
- Build creative tools that address new custom problems
- Reduction of cost
- Maintaining the equipment in-house
- Easy to automate and work with useful data formats
- Better collaborations - reproducibility, user lead dev.

Asst. Prof. Dr. Tobias Wenzel

## Abstract

Open hardware solutions are increasingly being chosen by researchers as a strategy to improve access to technology for cutting-edge biology research. The use of DIY technology is already widespread, particularly in countries with limited access to science funding, and is catalyzing the development of open-source technologies. Beyond financial accessibility, open hardware can be transformational for the access of laboratories to equipment by reducing dependence on import logistics and enabling direct knowledge transfer. Central drivers to the adoption of appropriate open-source technologies in biology laboratories around the world are

# Open Hardware industry examples

Table 1. Examples of open hardware companies relevant for biology laboratories.

Company name	Field or product	Link
Tindie	Online marketplace for open electronics and hardware products. Sales platform for makers and small businesses	<a href="https://www.tindie.com/">https://www.tindie.com/</a>
SparkFun	Designs, manufactures, and sells open microcontroller development boards and breakout boards	<a href="https://www.sparkfun.com/">https://www.sparkfun.com/</a>
Seed Studio	Integrated platform for creating hardware solutions for IoT, AI, and Edge	<a href="https://www.seedstudio.com/">https://www.seedstudio.com/</a>
Sci-Bots	Dropbot, digital microfluidic control system	<a href="https://sci-bots.com/">https://sci-bots.com/</a>
Sanworks	Automated systems for neuroscience research	<a href="https://sanworks.io/">https://sanworks.io/</a>
Safecast	Crowdsourced environmental data with open hardware, originally radiation in Japan now also air quality globally	<a href="https://safecast.org/">https://safecast.org/</a>
Red Pitaya	FPGA-powered boards as multifunction laboratory and engineering instrument	<a href="https://redpitaya.com/">https://redpitaya.com/</a>
Public Lab	Community science tools for environmental monitoring	<a href="https://www.publiclab.org/">https://www.publiclab.org/</a>
Prometheus Science	Open hardware for biology consulting	<a href="https://prometheus-science.com/">https://prometheus-science.com/</a>
Precious Plastic	Plastic recycling equipment	<a href="https://preciousplastic.com/">https://preciousplastic.com/</a>
OpenTrons	Pipetting robot and add-ons	<a href="https://opentrans.com/">https://opentrans.com/</a>
OpenQCM	Quartz Crystal Microbalance, e.g., for protein affinity measurements at molecular resolution	<a href="https://openqcm.com/">https://openqcm.com/</a>
OpenFlexure Industries	Manufactures the openflexure microscope and openflexure block stage	<a href="https://openflexure.com/">https://openflexure.com/</a>
Open Ephys	Electrophysiology laboratory tools	<a href="https://open-ephys.org/">https://open-ephys.org/</a>
OpenBCI	Brain-computer interface platform	<a href="https://openbci.com/">https://openbci.com/</a>
Open Acoustic Devices	Designs supports and deploys acoustic hardware and software for environmental and wildlife monitoring projects, audio moth	<a href="https://www.openacousticdevices.info/">https://www.openacousticdevices.info/</a>
Olimex	Developer and provider for development tools for embedded market, including non-open boards	<a href="https://www.olimex.com/">https://www.olimex.com/</a>
neurogig	Instruments for neurophysiology laboratories	<a href="https://neurogig.com/">https://neurogig.com/</a>
Kitspace	Share and order electronic projects with the automatic component shopping list generator for github projects	<a href="https://kitspace.org/">https://kitspace.org/</a>
IORodeo	Designing and selling biolab hardware, now mainly potentiostats	<a href="https://iorodeo.com/">https://iorodeo.com/</a>
Elphel	Imaging hardware and software	<a href="https://www.elphel.com/">https://www.elphel.com/</a>
Beneficial Bio	Network of social enterprises for biolabs	<a href="https://beneficial.bio/">https://beneficial.bio/</a>
BeagleBoard	BeagleBone computers	<a href="https://beagleboard.org/">https://beagleboard.org/</a>
Backyard Brains	Demonstration instruments for neuroscience education	<a href="https://backyardbrains.com/">https://backyardbrains.com/</a>
Arduino	Designs and manufactures single-board microcontrollers and microcontroller kits for building digital devices	<a href="https://www.arduino.cc/">https://www.arduino.cc/</a>
Apertus	AXIOM cameras	<a href="https://www.apertus.org/axiom">https://www.apertus.org/axiom</a>
Adafruit	Designs, manufactures, and sells a number of electronics products, electronics components, tools, and accessories	<a href="https://www.adafruit.com/">https://www.adafruit.com/</a>
3D printer providers such as Prusa (Prusa Research), LulzBot (FAME 3D), Voron, Rostock Max (seemeecnc)	Providers of open source commercial 3D printers	<a href="https://www.prusa3d.com">https://www.prusa3d.com</a> <a href="https://lulzbot.com">https://lulzbot.com</a> <a href="https://vorondesign.com">https://vorondesign.com</a> <a href="https://www.seemeecnc.com">https://www.seemeecnc.com</a>

## GOSH Manifesto

[Deutsch](#) | [English](#) | [Español](#) | [Français](#) | [Português](#) | [中文](#) | [বাংলা](#) | [日本語](#)

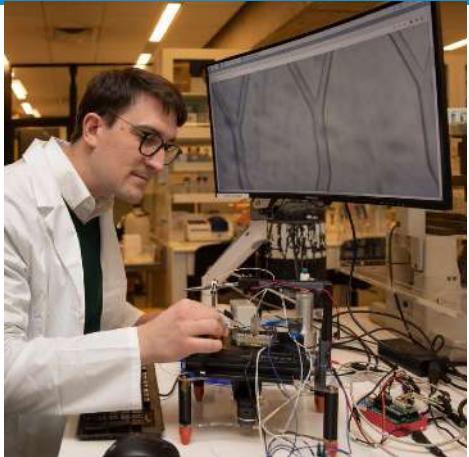

The Global Open Science Hardware (GOSH) movement seeks to reduce barriers between diverse creators and users of scientific tools to support the pursuit and growth of knowledge. These are our principles:

- ▼ GOSH is accessible
- ▼ GOSH makes science better
- ▼ GOSH is ethical
- ▼ GOSH changes the culture of science
- ▼ GOSH democratizes science
- ▼ GOSH has no high priests
- ▼ GOSH empowers people
- ▼ GOSH has no black boxes
- ▼ GOSH is impactful tools
- ▼ GOSH allows multiple futures for science
